

Multiplying with LEGO[®] Bricks

Brick Grouping Boards

Teaching multiplication can present a challenge for many teachers and frustration to many students. At its core multiplication is simply grouping numbers into sets, then determining the total number of sets in a given number of groups. Teaching multiplication facts from a table doesn't put this concept into a visual perspective for students. That is why I've created these multiplying with LEGO[®] bricks grouping boards.

Instructions:

- ◆ The best way to utilize the grouping boards is to print them on card stock, then laminate.
- ◆ Have your students use dry erase markers to solve the problems. Then your students can re-use them to practice their grouping skills helping to reinforce their multiplication skills.
- ◆ Have the student place the correct number of bricks into each grouping square. Then solve the problems by counting the number of bricks in the given number of groups.
- ◆ Once your student is showing proficiency in grouping. Then work with them by using a multiplication table to reinforce what they have learning in grouping.
